# Enhancements

## Introducing Minfos Notifier

**Minfos Notifier** is an application that displays all Minfos notifications that are sent to your email.

The application is located in the system tray and automatically displays messages on the bottom right corner of the computer screen. Notifier provides you with a convenient way to stay up to date with Minfos notifications, including new software releases, PBS outages and new supplier updates without having to navigate to your email.

You can set up Notifier to display on any of your terminals, making information more accessible to staff.

For more information, please read the [Minfos Notifier User Guide](#).

## Label Maintenance

### Generic details from the stock card can now be added to shelf labels

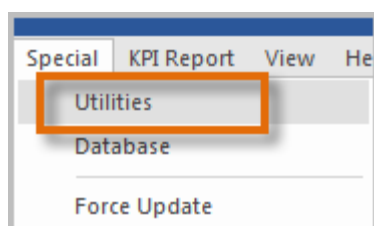

The generic drug name, from the generic field in the stock card, can now be added to a template and displayed on a shelf label.

When added in **Label Maintenance**, the label field will source the details from the **Generic** field in the stock card. If the **Generic** field in the stock card is blank, then nothing will be displayed on the shelf label.

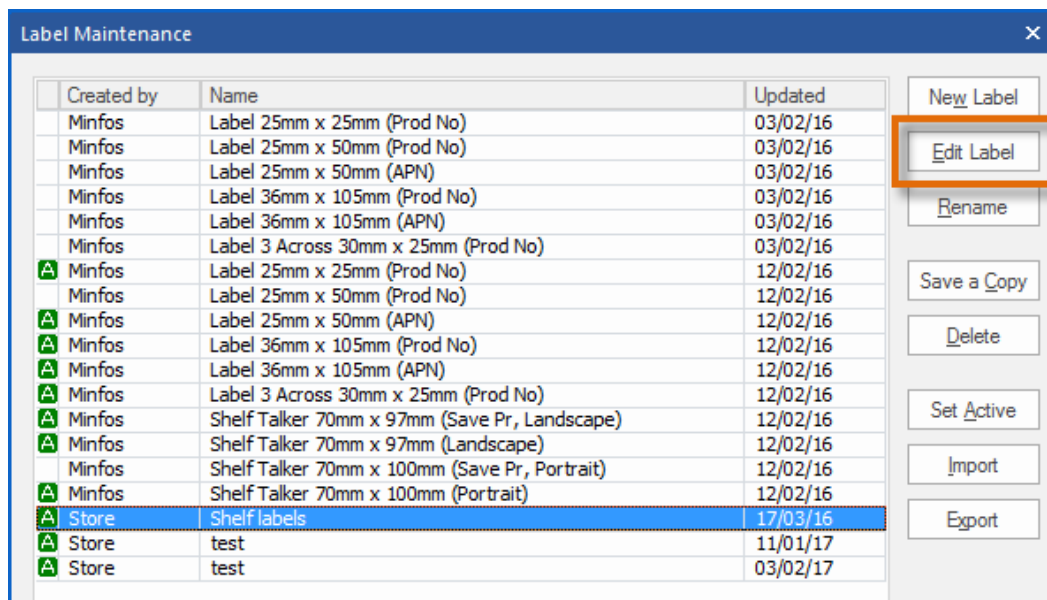

For more information on using Label Maintenance, please read the [Label Maintenance User Guide](#).

To add the **Generic** field to a shelf label:

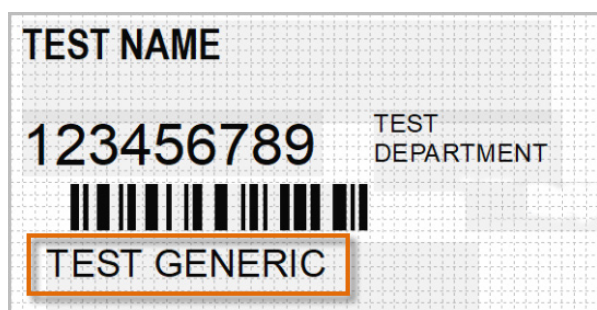

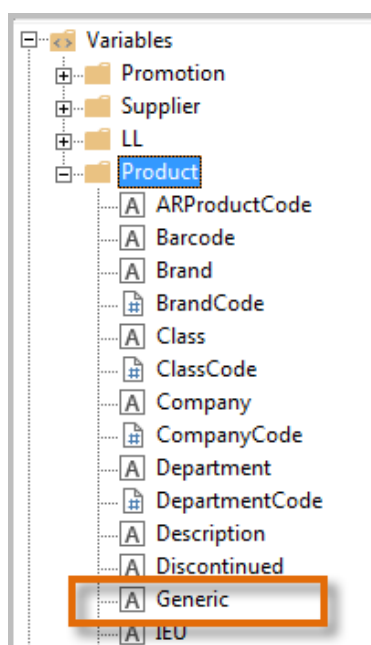

1. From the **Minfos Launch Pad**, click the **Special** menu and select **Utilities**.

2. On the **Utilities** window, click the **Label Maintenance** icon.
3. On the **Label Maintenance** window, select a store label and click the **Edit Label** button.

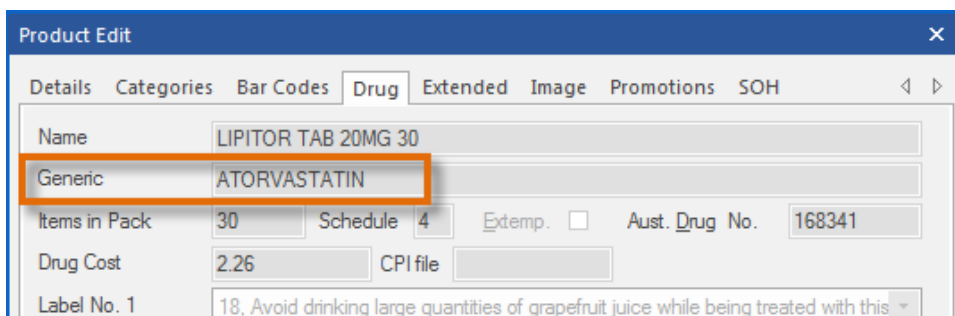

4. In the **Label Editor** window, from the **Product** dropdown, click and drag the **Generic** field onto the label.

5. Save your change and exit the **Label Editor**.
6. From the **Label Queue**, or another label printing dialog, print a label for a drug e.g. Lipitor 20mg, ensuring you select your recently edited template to print.

7. On the printed label, the added field will display the contents of the **Generic** field in the stock card.

**ATORVASTATIN**

## Stock Manager

### Re-labelled buttons in Stock Manager

To improve consistency when working across different Minfos screens we have relabelled the stock card access buttons in the **Order Edit** and the **Price Manager** windows in **Stock Manager**.

Previously accessible by the using **Edit** button, the stock card can now be opened by clicking on the **Stock Card** button at the bottom of the window, or by highlighting a product in the list and using [Alt+T].

### For TerryWhite Chemmart stores using Hub product updates only

### Updating to Minfos 5.7.2 will automatically update Preferred Suppliers that are set to MV:

Where a product has a Preferred Supplier of MV:, running a software update will update the Preferred Supplier to the TerryWhite Chemmart Preferred Supplier.

**Note:** This enhancement will not change the Preferred Supplier of products where the Preferred Supplier is not MV:.

# Resolved Issues

## Dispense

- Random characters no longer print at the end of Medicare numbers.
- It is now possible to use the **Prescriber Code** when supplying a **Continued Dispensing** script.
- Printing the expiry date of the script no longer prints the Approved Pharmacist Name and the Approval Number on the repeat forms.
- The **Repeat Reminder Report** now displays correctly when sorted by Hospital.
- The **Certification of Supply** no longer includes under co-payable scripts in the count.

## Stock Manager

- Advanced Search now finds products entered in lower case.

## Order Maintenance

- **Complete By Delivery** no longer causes duplicated orders under certain conditions.
- **Order Generation** will now generate correctly for products used for normal dispensing as well as Third Party Packing.

## Reporting

- Price changes performed at the Till are now recorded in the **Till Exception Report**.

## Multi-Store

- Items with a **Fixed Price** are now displayed correctly in Multistore Head Office **Dispense Drug Pricing**.

## Warehouse

- Minfos Warehouse now uses today's date, not the created date, when completing a sales order.
