# Enhancements

## Stock Manager

### Mark off Symbion orders by tote

To save you time and assist with the ordering process for Symbion, tote information, when available from Symbion, is now displayed in *Order Maintenance*.

Simply scanning, or manually entering the tote barcode (Serial Shipping Container Code - SSCC) into a prompt will display the contents of the tote, allowing you to quickly mark off products as you would with a hardcopy invoice.

#### Benefits of this enhancement include:

- The process of marking off and receipting of orders is streamlined, improving efficiencies and freeing up stock controller's time for other tasks.
- The contents of each tote is easily identified, speeding up the unpacking of orders.
- Items can be progressively marked off as checked before final receipting into the system.
- The order can be sorted by tote or value, allowing high-value items to be easily identified for manual verification.

+ SSCC information will be available from all Symbion warehouses except Kewdale, WA.

+ This integration does not use handheld PDA scanners or the Minfos Stocktake app.

For more information, please watch the [video](#).

### Easily sort columns in Order Editing

In **Order Editing**, you can now sort an order by simply clicking on the header of the appropriate column. The order can be sorted by ascending or descending order. For example, to sort the order by **Unit Cost** highest to lowest, click on the **Unit** column header twice. This will sort the contents of the order with the high cost items at the top of the window.

+ The order cannot be sorted by the 'icons' column.

+ The Sort By button, which was previously used to sort an order, has been removed.

## Re-labelled buttons in Stock Manager

To improve consistency when accessing the stock card across different Minfos windows, we have re-labelled the **Edit Prod** buttons to **Stockcard** [Alt+T], in the **Rolling Stock Take**, **Companion Products** and **Alternate Products** windows.

## Reports

### Changes to the Print Manager Screen

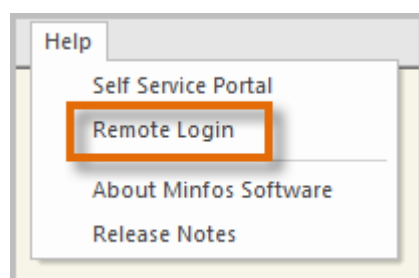

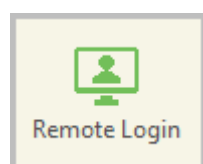

We have improved the presentation and increased the font size of displayed reports in the **Print Manager** window (the screen that displays when any report is generated in Minfos).

These changes have improved the display in windows where there is a large amount of data, for example the **Product Audit Report**.

## Remote assistance from the Minfos support team

Some support requests require you to give a Minfos support team member permission for remote access to your computer using the ScreenConnect service.

When a support team member gives you the code, just click the new **Remote Login** icon on the Minfos Launch Pad (or select from the **Help** menu) and enter the code to start the remote access session.

# Resolved Issues

## Dispense

- The title of a customer is now displayed in the **Customer Search Window**.
- Changing the **Date of Previous Supply** in the **Repeat Details** window no longer causes incorrect display of the Safety Net Consequences/Reg 25 prompt.
- Minfos now prevents the editing of a script in **Manage Claims** when it is selected at the Till.
- **Set Special Price** now displays the correct price regardless of the previously dispensed script.

## Accounting

- Supplier electronic payment account details are now correctly exported in Minfos Payables Electronic Payment.

## Stock Manager

- The **Supplier Product Audit Report** now correctly displays the changes made by the wholesaler update.

## Reports

- The **Email Result Report** now correctly displays for a **Customer Code** containing spaces.
